

ADVISORY

Mini Cordless Angle Grinder

(Art.:No AGMN76)

The **AGMN76** is intended for **convenient, precise tile trimming, notch cutting, and light stone shaping**. It is designed for short, accurate cuts rather than long, continuous operation.

Recommended Operating Pattern

Use the tool at an approximate 3:1 work-to-rest ratio.

For example, after **90 seconds of continuous cutting**, allow the unit to **cool for at least 30 seconds**. Apply light pressure and always use the correct disc to minimise chipping and prevent overheating.

Performance Notes

Run time will vary depending on the material and load. Excessive force or cutting dense material may cause the grinder to temporarily shut down to protect the motor and battery. Once fully charged, disconnect the battery from the charger — **do not leave the unit on charge overnight**.

Application Guidance

For thicker stone, large-format tiles, or continuous professional cutting, **we recommend using a dedicated wet saw or a larger grinder**, as these are better suited to heavy-duty and sustained cutting tasks.
