

PRODESO® DRAIN SYSTEM is a waterproof, draining, uncoupling membrane that allows the vapour management, with a thickness of only 5/8 mm. The membrane is composed of a high density polyethylene sheet at the top of which is thermo-welded a polypropylene draining fabric; below is glued a non-woven polypropylene fabric. The semicircular truncated pyramidal cavities of the sheet, create an "air chamber" under the tiles which facilitates the air movement allows the drainage and rapid drying of the adhesive thus reducing the risk of the triacetates present in it rising and the formation of efflorescence in the joints. Thanks to its structure, PRODESO® DRAIN can also be applied on substrates that are not perfectly cured. Its draining capacity makes it particularly suitable for the laying of large size ceramic tiles slabs both indoors and outdoors.
